

**Verify Ability Test  
Report**

Name: **Peter Sample**

Date: 05 July 2011

## Ability Test Report

This Ability Test Report provides the scores from Mr Peter Sample's Verify Ability Tests. If these tests were unsupervised, there is a small possibility that these scores do not represent his actual level of ability. **A Verification Test is recommended to verify these scores.** (See the following page for guidance.)

### Inductive Reasoning

Percentile compared to the  
General Population 2009 comparison group

Level: **Junior Managerial**  
Language: **English - International**

Mr Peter Sample's estimated inductive critical reasoning ability is above average when compared to the comparison group. His result is better than 82% of the people in this group. This suggests that he will display a high level of ability in understanding incomplete information and solving novel problems by creating solutions from first principles.

### Numerical Reasoning

Percentile compared to the  
Senior Customer Contact Group 2007 comparison group

Level: **Supervisory**  
Language: **English - International**

Mr Peter Sample's estimated numerical critical reasoning ability is above average when compared to the comparison group. His result is better than 73% of the people in this group. This suggests that he will display a high level of ability in understanding or interpreting numerical data and mathematical calculations as compared to the group.

## Verbal Reasoning

Percentile compared to the  
Junior Manager Group 2007 comparison group

Level: **Supervisory**  
Language: **English - International**

Mr Peter Sample's estimated verbal critical reasoning ability is below average when compared to the comparison group. His result is better than 29% of the people in this group. This suggests that he will have difficulty in understanding and evaluating written reports and documents.

## Checking Test

Percentile compared to the  
comparison group

Level: **Supervisory**  
Language: **English - International**

Mr Peter Sample's estimated checking ability is above average when compared to the comparison group. His result is better than 84% of the people in this group. This indicates a high potential for comparing information quickly and accurately which is critical to ensuring the quality of work.

## Calculation Test

Percentile compared to the  
Senior Customer Contact - General Population 2009 comparison group

Level: **Supervisory**  
Language: **English - International**

Mr Peter Sample's estimated ability to reason with numbers and other mathematical concepts is above average when compared to the comparison group. His result is better than 80% of the people in this group. This indicates a high potential for adding, subtracting, dividing and manipulating numbers quickly and accurately which is critical to many workplace tasks involving calculations and estimations as well as auditing and checking the numerical work of others.

## Mechanical Comprehension

Percentile compared to the  
General Population 2011 Skilled Technical UKE comparison group

Level: **Skilled Technical**

Language: **English - International**

Mr Peter Sample's estimated mechanical comprehension ability is above average when compared to the comparison group. His result is better than 80% of the people in this group. This suggests that understanding and predicting the movements of parts within appliances and machinery is likely to be a strength for him.

**If any of these tests were administered without supervision, a Verification Test is recommended to determine if those results can be used with confidence.**

## ➤ Guidelines for using these results

If the results in this report were obtained from tests completed without supervision a Verification Test is recommended to confirm this individual's test results.

The Verification Test is shorter than the original Ability Test. It must be administered in a supervised setting and will determine if the result of the Ability Test is **Verified** or **Not Verified**. A Verified result can be used with confidence.

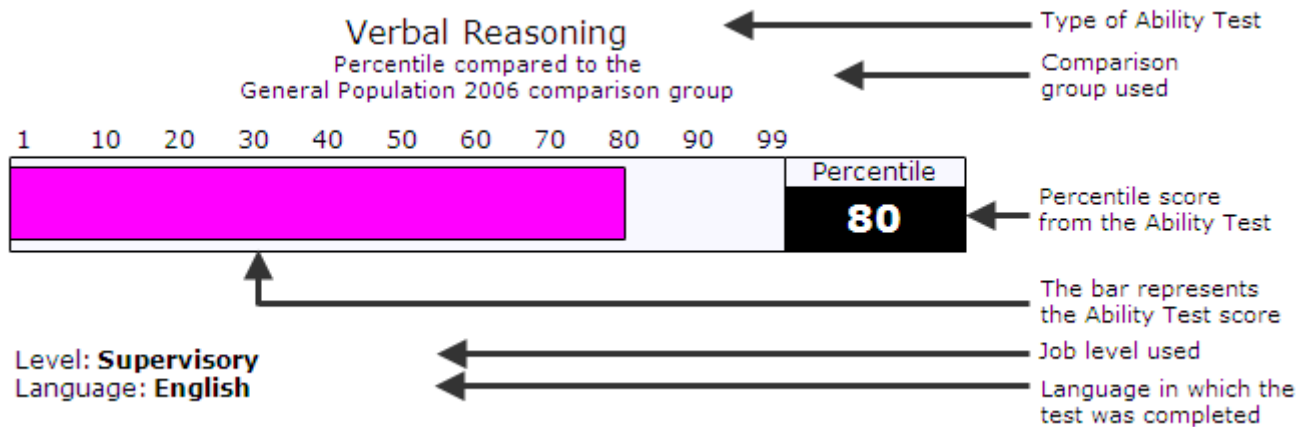

## ➤ How to verify a result

There are many ways to confirm an individual's ability level. Some techniques are listed below:

<b>Administer a Verification Test</b>	Administering a supervised Verification Test is the most consistent way to verify the original test results. This is strongly recommended.
<b>Consider information from other competency assessments</b>	Use results from other assessments that relate to the competencies and/or skills important for performance in the job to evaluate the person's actual ability level. For example work simulations, or assessment centres.
<b>Use information from other sources</b>	Results from examinations, qualifications, grades and other attainment tests that are appropriate measures of a person's cognitive ability may help to evaluate the person's actual ability level.
<b>Use structured interviewing techniques to probe related competencies</b>	Competencies related to cognitive ability include: <ul style="list-style-type: none"><li>• Presenting &amp; Communicating Information</li><li>• Writing &amp; Reporting</li><li>• Applying Expertise &amp; Technology</li><li>• Analysing</li><li>• Learning &amp; Researching</li><li>• Creating &amp; Innovating</li><li>• Formulating Strategies &amp; Concepts</li></ul>

The final decision on how to confirm and use the person's test results should follow internal policies and guidelines. Companies should evaluate the risks involved, corporate policy/governance, the use of other screening and selection tools, time, cost and other factors. All of these may be important when deciding the most appropriate method to verify an individual's Ability Test results.

## Information about this report

How to interpret this information

- The **bar chart** displays the individual's percentile score from the Ability Test.
- The **comparison group** identifies the specific group of people this person's score is compared against.
- The **percentile score** indicates how well this person scored against the people in the comparison group.
- For example, a percentile score of 50 means that the individual performed better than 50% of the people in the comparison group.

### About cognitive ability tests

Cognitive ability (numerical, verbal and other forms of critical reasoning ability) is the most effective, single predictor of future performance in many different jobs. However, many other factors also play an important role in predicting job performance. The information in this document should be used as part of a broader evaluation of this person's suitability and potential for the job.

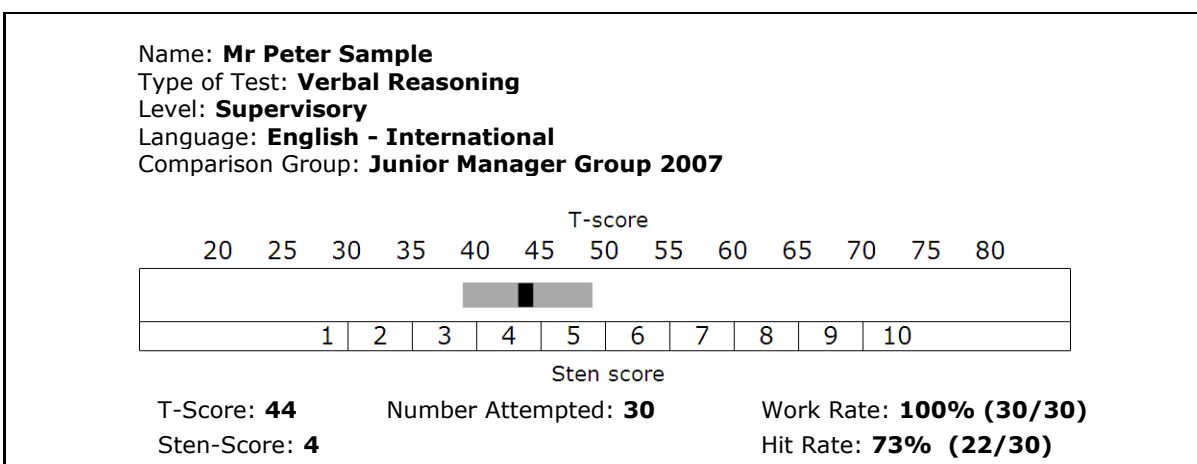

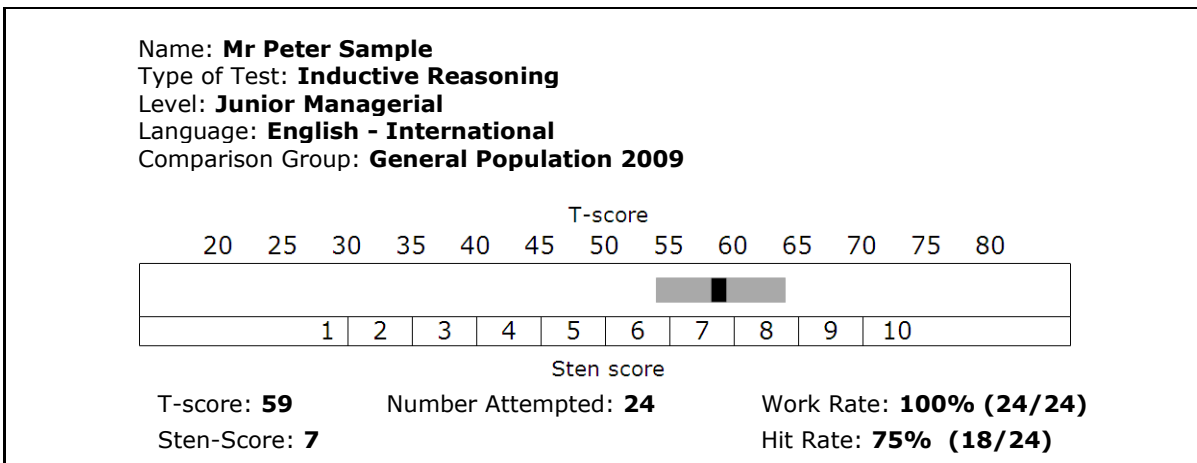

### More Information

Additional information and guidance on how to use the SHL Verify range of Ability Tests is available online at [www.shl.com](http://www.shl.com).

## Technical information

T-scores and Sten scores are provided for users who are trained in their appropriate use and interpretation.

A T-score is a standardised test score with a mean of 50 and a standard deviation of 10. The Sten score is a standardised score on a 10-point scale. It has a mean of 5.5 and a standard deviation of 2.

Name: **Mr Peter Sample**  
 Type of Test: **Checking Test**  
 Level: **Supervisory**  
 Language: **English - International**  
 Comparison Group: **General Population 2009**

T-score: **58**  
 Sten score: **7**

Name: **Mr Peter Sample**  
 Type of Test: **Calculation Test**  
 Level: **Supervisory**  
 Language: **English - International**  
 Comparison Group: **Senior Customer Contact - General Population 2009**

T-score: **58**  
 Sten score: **7**

Name: **Mr Peter Sample**  
 Type of Test: **Mechanical Comprehension**  
 Level: **Skilled Technical**  
 Language: **English - International**  
 Comparison Group: **General Population 2011 Skilled Technical UKE**

T-score: **58**      Number Attempted: **15**      Work Rate: **100% (15/15)**  
 Sten-Score: **7**      Hit Rate: **67% (10/15)**

The Report also includes information to give you an indication of the candidate's accuracy while completing the test. 'Number Attempted' refers to the number of questions the candidate has seen during the test. The total may include questions that the candidate has not provided a response to.

Work rate provides a measure of how far the candidate has got through the test, and is the number attempted divided by the total number of questions in the test. This is expressed both as a percentage and as raw data.

Hit rate provides a measure of accuracy, and is the number of questions the candidate has answered correctly divided by the total number of questions attempted. This is expressed both as a percentage and as raw data.

**Work rate and Hit rate provide measures of the number attempted and number answered correctly. More information on these measures is provided in the Verify User Guide. It is important to understand that because each candidate receives a different set of items, there is not a direct correlation between Hit rate/Accuracy and the Percentile, T or Sten score achieved; and individual with a lower hit rate may achieve a higher percentile score and vice-versa.**

**If any of these tests were administered without supervision, a Verification Test is recommended to determine if those results can be used with confidence.**

## ASSESSMENT METHODOLOGY

Questionnaire / Ability Test	Comparison Group
Managerial/Professional Inductive Reasoning UKE	General Population 2009
Supervisory Numerical Reasoning UKE	Senior Customer Contact Group 2007
Supervisory Verbal Reasoning UKE	Junior Manager Group 2007
Verify - Supervisory Checking UKE	General Population 2009
Verify - Supervisory Calculation UKE	Senior Customer Contact - General Population 2009

## ABOUT THIS REPORT

This report shows the result(s) obtained from ability test(s). The use of these tests is limited to those people who have received the necessary training in their use and interpretation.

The report herein is generated from the results of test(s) answered by the respondent. This report has been generated electronically - the user of the software can make amendments and additions to the text of the report.

SHL Group Limited and its associated companies cannot guarantee that the contents of this report are the unchanged output of the computer system. We can accept no liability for the consequences of the use of this report and this includes liability of every kind (including negligence) for its contents.
